Security Summary for www.udst.edu.qa

1. How Safe Is Our Website Right Now?

Our website has some strong security features, like a valid SSL certificate and an A grade from SSL Labs, which means our data is well-encrypted. However, there are a few areas that need attention. We're using outdated software and missing some important security protections, which could leave us vulnerable to attacks.

2. Big Problems We Should Know About

1. Outdated Software (Drupal 9)

- What's Wrong:** Our website runs on Drupal 9, which has known security flaws that hackers could exploit.
- How It Hurts Us:** This could lead to data breaches, unauthorized access, or website downtime, affecting our operations and reputation.
- How Likely:** These vulnerabilities are well-known, and attackers often target them.

2. Missing Security Headers

1. **What's Wrong:** We lack essential security headers like HSTS, making us vulnerable to certain attacks.
2. **How It Hurts Us:** This could allow hackers to intercept data or redirect users to malicious sites, risking customer trust.
3. **How Likely:** Without HSTS, we're more susceptible to these types of attacks.

3. Outdated TLS Protocol

1. **What's Wrong:** We're still using TLS 1.2, which is outdated and less secure.
 2. **How It Hurts Us:** This could make our site less secure and potentially fail security checks, affecting user trust.
 3. **How Likely:** Modern browsers may soon block TLS 1.2, so updating is crucial.
-

3. What We Can Do About It

1. Update Drupal and Plugins

1. **Why It Helps:** Fixes security holes, protecting us from data breaches and downtime.
2. **When to Act:** Do it now to prevent potential attacks.

2. Enable Security Headers

1. **Why It Helps:** Adds an extra layer of protection against attacks.
2. **When to Act:** Implement immediately for enhanced security.

3. Update TLS Protocol

1. **Why It Helps:** Ensures our site remains secure and compatible with modern browsers.
 2. **When to Act:** Update soon to avoid issues with browser compatibility.
-

4. What This All Means for Us

We have a solid foundation with our SSL and WAF, but we need to act quickly to fix vulnerabilities and update our security measures. By addressing these issues, we can protect our data, maintain customer trust, and ensure smooth operations. Let's take these steps to strengthen our security and keep our website safe.

Note: With Great Power, Comes Great Responsibility :3
